

Endo Skills Conference Highlights 2018-2020

ESOPHAGEAL

PRAGUE CRITERIA For Endoscopically Suspected Esophageal Columnar Metaplasia/Barrett's Esophagus

Developed by the Barrett's Oesophagus Subgroup of the International Working Group for the Classification of Reflux Oesophagitis (IWGCO)

UNIVERSITY OF ALBERTA
FACULTY OF MEDICINE & DENTISTRY

Prague Classification

1. Find Top of Gastric Folds (TGF)
2. Measure length of circumferential extent
3. Measure maximal extent of BE

Wong, Endoscopy
Skills Day 2018

Wong, Endoscopy Skills Day 2018

UNIVERSITY OF ALBERTA
FACULTY OF MEDICINE & DENTISTRY

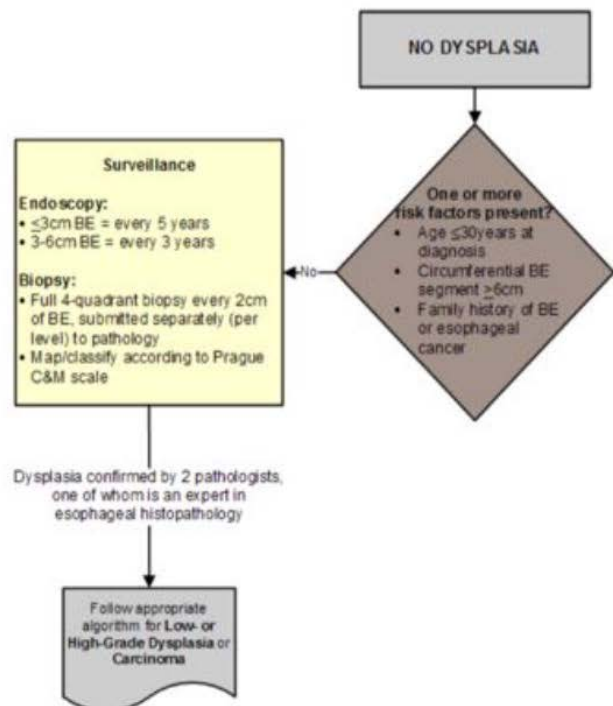

Biopsy Protocol for Barrett's

- If **no** history of dysplasia
 - Biopsy 4 quadrants every 2 cm in separate jars
- If known/suspected **dysplasia**, or indefinite for dysplasia, or first sets of biopsies
 - Biopsy 4 quadrants every 1 cm
- If any mucosal irregularities
 - EMR if accessible
- Biopsy and label to each zone - separate jar!

Gastroenterology 2011; 140:1084

BE-No dysplasia

UNIVERSITY OF ALBERTA
FACULTY OF MEDICINE &

Tips for Barrett's Exam

- Spend *at least* 1 min/cm of Barrett's examining → **improved detection of HGD/EAC ~6x**
- Pay close attention to proximal segment/right wall → **Higher incidence of HGD/EAC ~6x**
- Use acetic acid (1.5-3%) → **increases yield detection HGD/EAC ~15x vs random Bx**
- Use NBI(BLI/OE1) → **improved detection of HGD/EAC**

 Sharma, P. *et al.* Standard endoscopy with random biopsies versus narrow band imaging targeted biopsies in Barrett's oesophagus: a prospective, international, randomised controlled trial. *Gut* **62**, 15-21, (2013).

Bechara – Endo Skills Day 2020

Child Pugh (CP) Class

Criteria	1	2	3
Encephalopathy	None	Mild	Severe
Ascites	None	Controlled	Uncontrolled
Bilirubin	≤ 33	34-50	≥ 51
Albumin	≥ 36	28-35	≤ 27
INR	≤ 1.6	1.7-2.2	≥ 2.3
Class	A = 5-6 pts	B = 7-9 pts	C = 10-15 pts

Prevalence of Varices

Growth of Varices

Burak, Endoscopy Skills Day 2018

Eosinophilic Esophagitis: EREFS

Slide courtesy of Dr. Hirano

Endoscopic Reference Score – EREFS

Major Criteria

	Grade 0	Grade 1	Grade 2	Grade 3
Edema (loss vascular markings) Grade 0: Distinct vascularity Grade 1: Decreased Grade 2: Absent				
Rings (trachealization) Grade 0: None Grade 1: Mild (ridges) Grade 2: Moderate (distinct rings) Grade 3: Severe (not pass scope)				
Exudate (white plaques) Grade 0: None Grade 1: Mild ($\leq 10\%$ surface area) Grade 2: Severe ($>10\%$ surface area)				
Furrows (vertical lines) Grade 0: None Grade 1: Mild Grade 2: Severe (depth)				
Stricture Grade 0: Absent Grade 1: Present

Wong, – Endo Skills Day 2020

GASTRIC

High Quality Gastroscopy, Bechara – Endo Skills Day 2020

Luminal Anatomy-The hypopharynx

My Approach: Esophageal Exam

- **Clean** the esophagus and identify landmarks
- **Macroscopic** examination
 - White light
 - Image enhanced endoscopy (NBI/BLI/OE-1) for squamous
 - Image enhanced endoscopy all modalities for Barretts
- **Microscopic** exam of specific lesions
 - White light, image enhanced endoscopy
 - Compare to adjacent normal mucosa
- **+/- Supplemental**
 - Squamous Lugols 2.5%: Repeat Macro/Micro
 - Barrett's Acetic Acid 1.5%: Repeat Macro/Micro

Summary

- Pharyngeal and Esophageal squamous neoplasia
 - NBI/BLI/OE-1 are the preferred modes for detection
- Identify Esophageal/Gastric landmarks
- Barrett's Neoplasia
 - Acetic acid and NBI are useful for improving detection of HGD/EAC
 - Spend at least 1min/cm Barrett's and pay attention to proximal area and right hemisphere
- Gastric Neoplasia
 - Use defoaming agent and mucolytic to achieve clear views
 - Spend at least 7 minutes on EGD exam maximize detection of neoplasia
 - Systematic examination of the stomach to improve detection of neoplasia

Gastric Polyps, Bechara - Endo Skills Day 2020

Fundic Gland Polyps

- Document: size, number, location
- If:
 - <1cm → representative bx
 - >1cm → generally recommend resection
 - >20, LGD or duodenal adenomas
 - Sample based on above and also C-scope
- Resection tips*
 - Use a thicker, braided snare (offers more coagulation)
 - Ensure you get snare to base of FGP (can be aided by injection)
 - Careful around the stalk may cold cut through → minor bleeding

Clinical
Endoscopic Appearance
Management
Follow-up

Hyperplastic polyps

- Second most common type gastric polyp
- Usually as result of recurring insult
 - Chronic gastritis (chemical, reactive, H.pylori), portal HTN
- Risk of dysplasia
 - ~2-20%
- Risk of carcinoma ~0.5-2%

Clinical
Endoscopic Appearance
Management
Follow-up

braham SC, Singh VK, Yardley JH, et al. Hyperplastic polyps of the stomach: associations with histologic patterns of gastritis and gastric atrophy. Am J Surg Pathol 2001;25:500-7.
rlowska J, Jarosz D, Pachlewski J, et al. Malignant transformation of benign epithelial gastric polyps. Am J Gastroenterol 1995;90:2152-9.

Clinical
Endoscopic Appearance
Management
Follow-up

Hyperplastic polyps

- <1cm representative sample via bx
- If >1cm generally resect
 - If <3cm and known H.P +ve, recommend eradication and repeat EGD 3-6 months *prior to resection* as likely to regress
 - If >3cm, resect regardless of H.P status as unlikely to regress
- Thorough assessment of background mucosa with IEE + Sydney protocol for mapping Bx

Ohkusa, T. et al. Endoscopic, Histological and Serologic Findings of Gastric Hyperplastic Polyps after Eradication of Helicobacter pylori. *Digestion* 68, 57-62, (2003).

Clinical
Endoscopic Appearance
Management
Follow-up

Adenomatous polyps

- Most common neoplastic polyp
- Typically associated with H.pylori, atrophic gastritis, intestinal metaplasia
- High incidence of synchronous dysplastic lesions up to ~30%
- Risk of carcinoma
 - For >2cm up to 40%

Rugge M, Farinati F, Baffa R, et al. Gastric epithelial dysplasia in the natural history of gastric cancer: A multicenter prospective follow-up study. *Gastroenterology* 1994;107:1288-1296.

Endoscopic Surveillance for gastric intestinal metaplasia

Presented by Rachid Mohamed – Endo Skills Day 2019

Intestinal metaplasia
(extensive) with no
dysplasia

- Recommended endoscopy every 3 years

Intestinal metaplasia
(limited to antrum)
with no dysplasia

- No recommended surveillance

Intestinal Metaplasia
with lesion

- Requires complete endoscopic excision for pathology
- EMR vs. ESD – a debate for another day

Intestinal Metaplasia
with LGD

- Annual endoscopic follow up with biopsies

Intestinal Metaplasia
with HGD

- Immediate repeat endoscopy with further sampling
- Ongoing surveillance every 6-12 months

Approach to UGI Bleed, Hundal - Endo Skills Day 2020

Risk Stratification Scores: Rockall

Age

- ☐ <60 years old (0 points)
- ☐ 60-79 years old (1 point)
- ☐ ≥80 years old (2 points)

Hemodynamic Shock

- ☐ None with systolic BP ≥100 mmHg and pulse <100/min (0 points)
- ☐ Tachycardic with pulse ≥100/min but systolic BP ≥100 mmHg (1 point)
- ☐ Hypotension with systolic BP <100 mmHg (2 points)

Major Comorbidities

- ☐ None (0 points)
- ☐ Cardiac failure, ischemic heart disease or similar major comorbidity (2 points)
- ☐ Renal failure, hepatic failure or disseminated cancer (3 points)

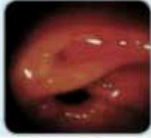

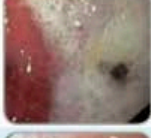

Diagnosis

- ☐ Mallory-Weiss tear, but no major lesions and no stigmata of recent bleed (0 points)
- ☐ Other nonmalignant gastrointestinal diagnoses (1 point)
- ☐ Upper gastrointestinal tract malignancy (2 points)

Recent hemorrhage

- ☐ None (or dark area only) (0 points)
- ☐ Blood found in upper gastrointestinal tract (clot adherence, spurting or visible vessel) (2 points)

FORREST CLASSIFICATION OF ULCERS			REBLEED RISK (WITHOUT THERAPY)
I: BLEEDING	Ia Spurting		85-100%
	Ib Oozing		10-30%
II: STIGMATA OF RECENT HAEMORRHAGE	IIa "Visible Vessel"		50-60%
	IIb Adherent Clot		25-35%
	IIc Pigmented Spot		<8%
III: CLEAN BASE			<5%

COLONIC

Figure 1. Risk of occult SMIC according to gross morphology and location (n = 1712).

Burgess et al Gastro 2017 presented by Heitman

Sessile Polyps, Telford, Armstrong - Endo Skills Day 2020

Recognition of Potential Malignancy

- Abnormal irregular small blood vessels & pit patterns
- Kudo Pit pattern
- Paris Classification – especially IIa + IIc
- Non-granular surface (LST-NG)
- Ulceration
- Induration
- Stiffening of colonic wall (no change on insufflation / aspiration)
- Non-lifting sign

Paris Classification, Wong, Endo Skills Day 2019

Lutzak - Endo Skills Day 2020

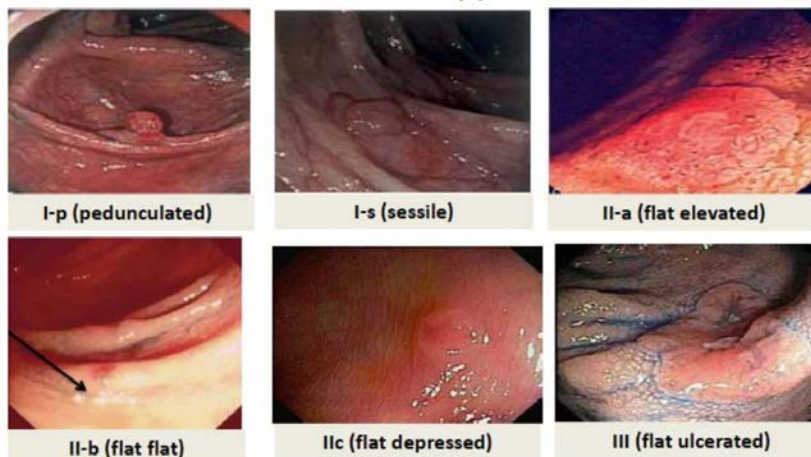

Polyps: Paris Classification

Table 1. The original Paris classification of early neoplasia morphology (8)

Pedunculated	Ip
Subpedunculated	Isp
Sessile, higher than height of closed forceps (2.5 mm)	Is
Slightly elevated, below height of closed forceps (2.5 mm)	Ila
Completely flat lesion, does not protrude above mucosal surface	Ilb
Slightly depressed, lower than mucosa but depth less than 1.2 mm	Ilc
Excavated/ulcerated, deep ulcer below mucosa below 1.2 mm	III

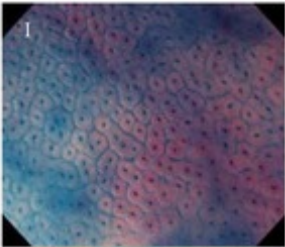

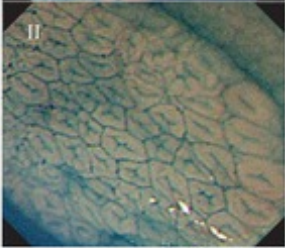

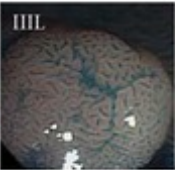

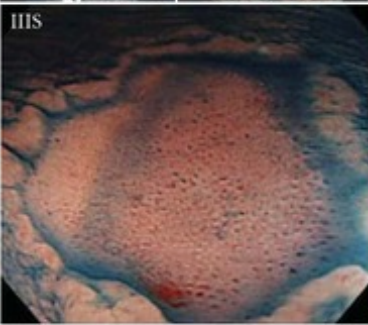

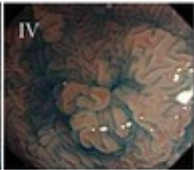

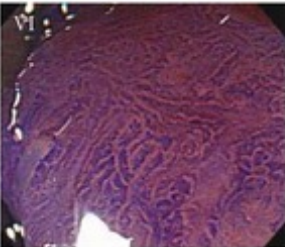

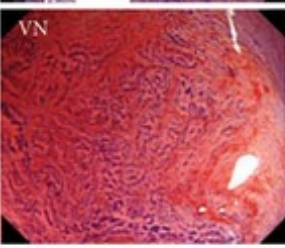

Paris Classification of Polyps

Coe SG et al. Am J Gastroenterol 2013; 108:219–226 - EQUIP Training Slide Set 2

Kudo Pit Pattern, Heitman – Endo skills day, 2018

	Clinical classification		
	Nonneoplastic pattern	Noninvasive pattern	Invasive pattern
Kudo's classification	I · II	III _L · III _S · IV · (part of VI)	VI · VN
Endoscopic findings	 	  	 
Histology	Normal hyperplastic polyp	Adenoma *m **sm-slight	*sm-deep
Treatment	No treatment	Endoscopic treatment (polypectomy or EMR)	Surgical treatment

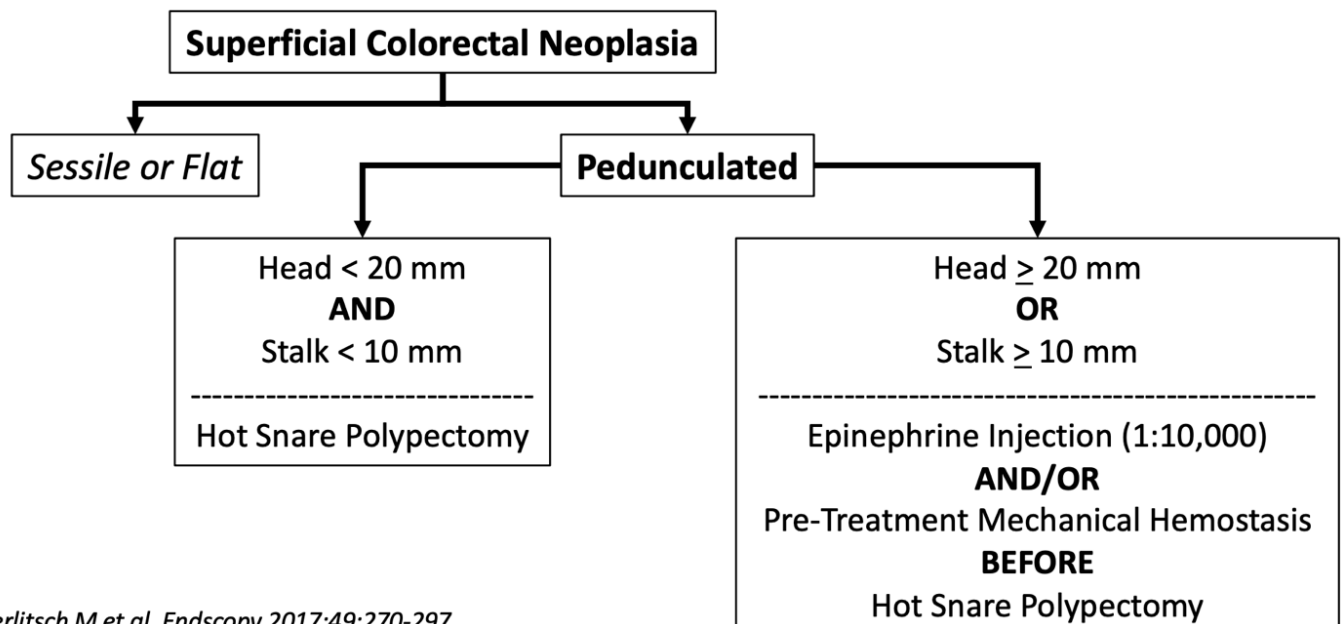

* Intramucosal cancer, **sm superficial invasion (<1000 μm), *sm deep invasion (≥1000 μm).

Potholes are Bad! (Kudo 5-6) more likely cancer

Pedunculated Polyps, Telford, Armstrong – Endo Skills Day 2020

Unsuccessful Lift

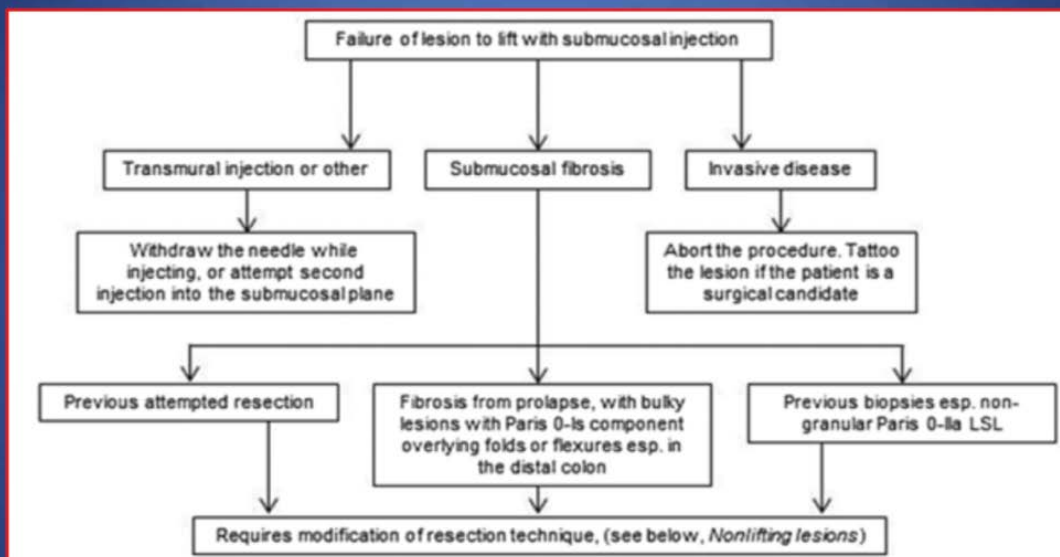

Fig. 2. Initial approach to nonlifting lesion following submucosal injection.

Jideh B and Bourke MJ. *Gastrointest Endoscopy Clin N Am* 29 (2019) 629–646

Sydney Classification of Deep Mural Injury (DMI) following EMR

- Type 0** Normal defect. Blue mat appearance of obliquely oriented intersecting submucosal connective tissue fibres.
- Type I** MP visible, but no mechanical injury.
- Type II** Focal loss of the submucosal plane raising concern for MP injury or rendering the MP defect uninterpretable.
- Type III** MP injured, specimen target or defect target identified
- Type IV** Actual hole within a white cautery ring, no observed contamination
- Type V** Actual hole within a white cautery ring, observed contamination

ORIGINAL ARTICLE

Deep mural injury and perforation after colonic endoscopic mucosal resection: a new classification and analysis of risk factors

Nicholas G Burgess,^{1,2} Milan S Bassan,¹ Duncan McLeod,³ Stephen J Williams,¹ Karen Byth,⁴ Michael J Bourke^{1,2}

presented by Heitman,
Mohamed, Endo Skills Days
2018

Type 0-1 Injury

Figure 3 (A, B) A 'type 0' defect is a normal postresection finding. The mucosa has been completely resected revealing the underlying partially resected submucosa. The submucosa is homogeneously stained by the chromogelofusine dye. Submucosal vessels may be exposed but are uninjured. (C, D, E, F) A 'type I' defect occurs when the submucosa has been completely resected and the underlying muscularis propria (MP) is revealed. The MP does not avidly stain with the chromic dye so has a white appearance, and the circumferential striations of the muscle layer are seen. This appearance resembles the ventral pleats of a blue whale seen from underwater so is referred to as the 'whale' sign (F). © Doc White / naturepl.com.

If unsure: spray MB post Clip post polypectomy 2-4 (not 0-1)

Type 2 Injury

Figure 4 In a 'type II' defect, the distinction between submucosa and muscularis propria is unclear often due to poorly staining submucosal fibrosis. (A) In this image, an area of poorly staining defect and submucosal fat is noted following snare resection. (B) Two clips are placed over the area of concern. (C) A focal area of fibrosis is noted following resection of a 30 mm caecal lesion. The area is interrogated by topical application of dye staining via an injection catheter with the needle retracted, however, it remains unstained. Clips are then placed across the area of concern. The first clip is shown in-situ, further clips were subsequently placed to close the entire fibrotic area. (E, F) An area of poor staining overlying a fold is treated with three clips. (G) This defect has a central area of fibrosis and cautery effect impairing the assessment of deep injury.

Type 3-5 Injury (Including Target Sign)

Figure 5 A 'type III' defect refers to partial resection of the muscularis propria resulting in a defect target sign (DTS) (A, B, C) or a specimen target sign (D, E, F). These defects require clip closure of the DTS to prevent delayed perforation. A type IV defect is a complete hole, or full-thickness resection of the muscularis propria which is clean and not contaminated by faecal effluent. (G, H, I) A concentric ring of cautery artefact to the muscularis is observed. These defects should be closed immediately, although resection of the surrounding adenoma prior to clip placement should be performed where possible. If the closure site is not clear of adenoma, follow-up attempts at resection may be hampered by submucosal fibrosis, clip artefact and buried adenoma. A type V defect occurs where the full thickness perforation is contaminated by faecal effluent. These defects should also be closed and a surgical consultation obtained. Acute surgical intervention is required if there is clinical deterioration, features of peritonitis, evidence of significant free intraperitoneal fluid or failed endoscopic resection.

Position Change

S Thomas Gibson, 2012 – Presented by Wong, Endo
Skills Day 2019

Easy in light

P Prone

Bailey's Top Colon Tips, Bailey - Endo Skills Day 2020

Bailey's Tip Again- Do The 4 Suggestions

- Take your time withdrawing (6 Min)
- Retroflex in rectum
- Use Buscopan for any unwanted contractions
- Position the patient for better viewing- (even when they are deeply sedated)

Gastrointestinal Endoscopy 2019)

Water exchange colonoscopy tips and tricks

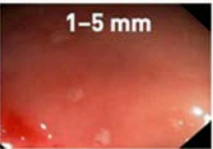

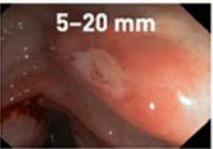

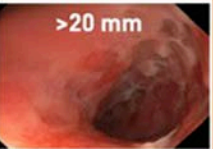

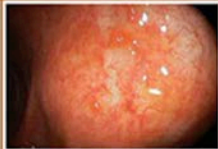

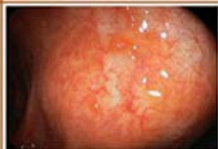

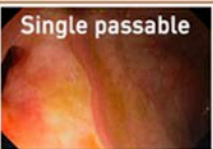

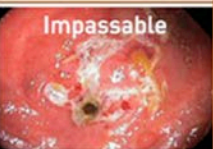

- Water infusion is the least painful insertion technique reducing pain and requirement for sedation
- Colon cleanliness is increased leading to adenoma detection rate increase overall as well as in screening colonoscopies
- Cecal intubation time is marginally longer but only a total of one or two minutes.

GIE 2019

G I E August 2019

Inflammatory Bowel Disease, Marr, Endo Skills Day 2019

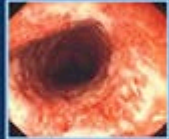

SES-CD activity index				
SES-CD	0	1	2	3
Presence and size of ulcers		1–5 mm 	5–20 mm 	>20 mm 
Extent of the ulcerated surface		<10%	<10–30%	>30%
Extent of the affected surface		<50%	<50–70%	>70%
Presence and type of stenosis		Single passable 	Multiple passable 	Impassable 
5 segments	Rectum Left colon Transverse colon Right colon Ileum	SES-CD	<Inactive 3–6 Mild activity 7–15 Moderate activity ≥16 Severe activity	

Section II.2.1.1. Figure 3. SES-CD activity index.

Mayo Score, Marr, Endo Skills Day 2019

Mayo Score of Endoscopic Severity of Disease (used in ASCEND, MATRIX, ACT Studies)

0 = NORMAL	1 = MILD	2 = MODERATE	3 = SEVERE
			
<ul style="list-style-type: none"> • No friability or granularity • Intact vascular pattern 	<ul style="list-style-type: none"> • Erythema • Diminished or absent vascular markings • Mild granularity 	<ul style="list-style-type: none"> • Marked erythema • Absent vascular markings • Granularity • Bleeds with minimal trauma (friability) • No ulcerations 	<ul style="list-style-type: none"> • Marked erythema • Absent vascular markings • Granularity • Friability • Spontaneous bleeding in the lumen • Ulcerations

Standard "mucosal healing" is subscore of 0 or 1

Dysplasia Surveillance, Marr, Endo Skills Day 2019

Timeline of endoscopic surveillance according to risk factors after screening colonoscopy.
CRC, colorectal cancer; PSC, primary sclerosing cholangitis; OLT, orthoptic liver transplantation.

Risk level	Risk factors	Surveillance
Lower risk	Extensive colitis with mild endoscopic or histological inflammation Colitis affecting <50% of the colon	Every 5 years
Intermediate risk	Extensive colitis with mild endoscopic or histological inflammation [or both] CRC in a first-degree relative older than 50 years	Every 2–3 years
Higher risk	Extensive colitis with moderate-to-severe endoscopic or histological inflammation [or both] CRC in a first-degree relative younger than 50 years History of PSC [included post-OLT] Stricture in past 5 years Dysplasia in the past 5 years in a patient who declines surgery	Yearly

Colonoscopist

Trainer / Peer

Date (DD/MM/YYYY)

Scale and Criteria Key

- 4 Highly skilled performance
- 3 Competent and safe throughout procedure, no uncorrected errors
- 2 Some standards not yet met, aspects to be improved, some errors uncorrected
- 1 Accepted standards not yet met, frequent errors uncorrected
- n/a Not applicable

■ Major Criteria

□ Minor Criteria

Criteria	Scale	Comments
Assessment, consent, communication <ul style="list-style-type: none"> ■ Obtains informed consent using a structured approach <ul style="list-style-type: none"> ○ Satisfactory procedural information ○ Risk and complications explained ○ Co-morbidity ○ Sedation ○ Opportunity for questions ■ Demonstrates respect for patient's views and dignity during the procedure ■ Communicates clearly with patient, including outcome of procedure with appropriate management and follow up plan. Full endoscopy report. 		
Safety and sedation <ul style="list-style-type: none"> ■ Safe and secure IV access ■ Gives appropriate dose of analgesia and sedation and ensures adequate oxygenation and monitoring of patient ■ Demonstrates good communication with the nursing staff, including dosages and vital signs 		
Endoscopic skills during insertion and procedure <ul style="list-style-type: none"> □ Checks endoscope function before intubation □ Performs PR ■ Maintains luminal view / inserts in luminal direction ■ Demonstrates awareness of patient's consciousness and pain during the procedure and takes appropriate action □ Uses torque steering and control knobs appropriately □ Uses distension, suction and lens washing appropriately ■ Recognises and logically resolves loop formation □ Uses position change and abdominal pressure to aid luminal views □ Completes procedure in reasonable time 		
Diagnostic and therapeutic ability <ul style="list-style-type: none"> ■ Adequate mucosal visualisation ■ Recognises caecal/desc. colon landmarks or incomplete examination ■ Accurate identification and management of pathology ■ Uses diathermy and therapeutic techniques appropriately and safely ■ Recognises and manages complications appropriately 		
ENTS (endoscopic non-technical skills) <ul style="list-style-type: none"> ■ Communication and teamwork ■ Situation awareness ■ Leadership ■ Judgement and decision making

Services

Alberta Colorectal Cancer
Screening Program

Suggested Management of Antithrombotic Agents for a Screening-Related Colonoscopy

Antithrombotic Agent	Recommended interval between last dose and procedure	Recommended interval between procedure and next dose	If therapeutic intervention performed*
Anticoagulant agent			
Coumadin® (warfarin)	5 d	<24 hrs	<24 hrs
Low molecular weight heparin (LMWH)**	24 hrs	<24 hrs	48 hrs
Pradaxa® (dabigatran) (Predominantly renal excretion. Assessment of renal function is essential)	48 hrs GFR ≥60 mL/min 5 d GFR 30-59 mL/min GFR <30 mL/min=NOT ELIGIBLE FOR SCREENING COLONOSCOPY	1 d	48 hrs
Xarelto® (rivaroxaban)	48 hrs	1 d	48 hrs
Eliquis® (apixaban)	48 hrs	1 d	48 hrs
Antiplatelet agent			
Aspirin® (81 mg or 325 mg)	continue		N/A
Plavix® (clopidogrel)	5 d	1 d	1 d
Effient® (prasugrel)	5 d	1-2 d	1-2 d***
Brilinta® (ticagrelor)	5 d	1-2 d	1-2 d***
Aggrenox® (dipyridamole/ASA) (consider starting Aspirin bridge)	7-10 d	1 d	1 d
<p>GFR-glomerular filtration rate mL/min. In the absence of kidney damage, a GFR ≥60 mL/min/1.73sq.m is considered normal. Please see http://www.akdn.info/index.php for more information regarding GFR.</p> <p>*Restarting antithrombotics is dependent on endoscopic intervention performed during the procedure. When large polyps (≥1cm) have been removed with electrocautery, use caution if restarting NOACs – therapeutic anticoagulation occurs within a few hours of restarting the drug.</p> <p>**warfarin and LMWH bridging instructions for a screening-related colonoscopy can be found in the ACRCSF Antithrombotic Management document available on http://www.albertahealthservices.ca/9232.asp</p> <p>***Restarting prasugrel and ticagrelor should be approached cautiously after polypectomy; both drugs achieve full antiplatelet effect in 4 hours.</p>
