

Rachid Mohamed

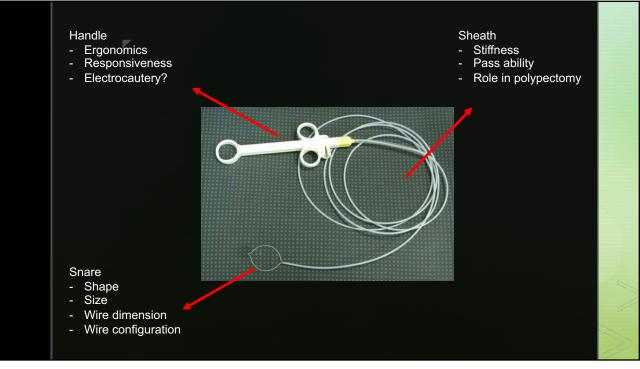

University of Calgary

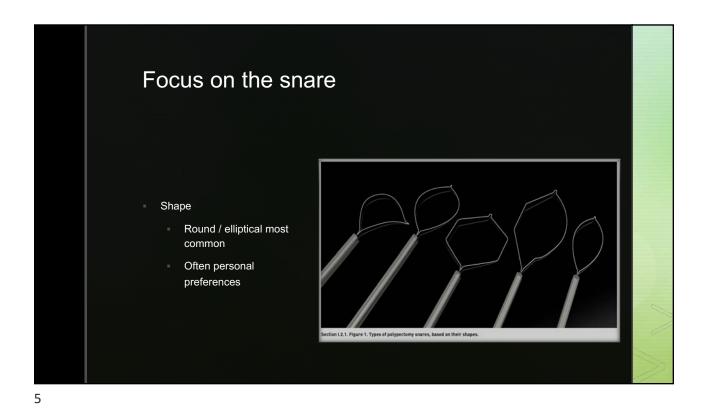

1

Objectives

- Understand the principles of snare design and function
- Review the features of cold and hot snare
- My recommendations on how to stock an endoscopy unit

Focus on the snare

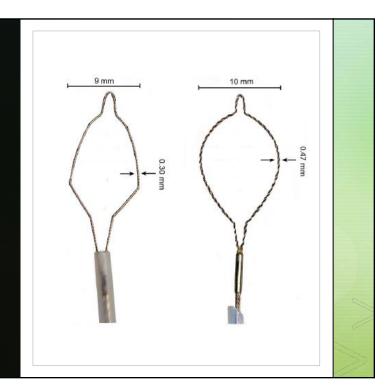

Important to choose the correct size for the desired outcome (no more "give me a snare")

Smaller allows more maneuverability
Diameter of snare does not limit the size of polyp that can be removed

Also speaks to our inaccuracies in estimating polyp size

Focus on the snare

- Wire dimension
 - Can tenths of mm really make a difference??

7

It depends on your desired outcome

- Thin wire snares
 - Anchor to and grasp tissue more desirably
 - Permit more <u>rapid</u> and <u>complete</u> transection of tissue without the use of cautery
- Thick wire snares
 - Allow controlled passage of electrocautery
 - Avoids undesired rapid transection

Differences for nursing assistant

- Different feel of ensnared polyp tissue
- Transection feedback

9

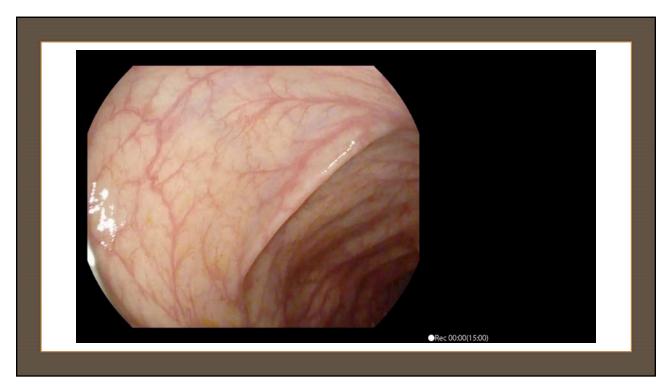

Thin vs thick wire – Cold Snaring

- Comparative, prospective RCT
- N 210

	snare group	Dedicated cold Traditional cold snare group snare group P value		
	share group	situte group	r varue	
Total	91 (89/98)	79 (88/112)	.015	
Size, mm				
≤5	92 (35/38)	91 (41/45)	.87	
6-7	93 (39/42)	82 (37/45)	.14	
8-10	83 (15/18)	45 (10/22)	.014	
Location				
Left colon	95 (38/40)	82 (40/49)	.06	
Right colon	88 (51/58)	76 (48/63)	.10	
Shape				
Flat	74 (17/23)	42 (8/19)	.037	
Sessile	96 (64/67)	91 (74/81)	.32	
Pedunculated	100 (8/8)	50 (6/12)	.017	

Horiuchi a et al. GIE 2015

So what to use? The majority of polyps removed are <10mm Current guidelines support CSP for polyps < 10mm 'Workhorse' snare should target these lesions

13

So what to use? Some polyps warrant electrosurgery Pedunculated lesions Lesions > 10-15mm Lesions appropriate for complex mucosal resection

My recommendations 1. Cold snare User preference, size 8-12mm 90% of stock 2. Hot snare 10-15mm in size; useful for pedunculated lesions, EMR 9% of stock 3. Specialty snares Large diameter (25-30mm) - for rare large pedunculated lesion Braided, anchoring, etc 1% of stock
